EDUCATION

Institute of Advanced Research

B.Tech. Computer Engineering (Artificial Intelligence)

CGPA: 9.07/10

Gandhinagar, Gujarat

June 2022 – Present

PROJECTS

Sentiment Analysis: Understanding Emotions

Dec. 2024 – Mar. 2025

- * Designed and implemented a sentiment analysis system to classify customer emotions.
- * Created a custom dataset to enhance model accuracy and reduce bias.
- * Used Python libraries (NLTK, Seaborn, WordCloud) and cloud tools (TextBlob, BERT, ChatGPT-4o).
- * Proposed improvements like sarcasm detection and emotion lexicon expansion.

Neural Style Transfer

Mar. 2025 – May 2025

- * Built a neural style transfer model using CNNs to blend image content with artistic style.
- * Utilized VGG19 pre-trained model for feature extraction and loss computation.
- * Minimized style and content loss for optimized image generation via gradient descent.
- * Demonstrated artistic renderings by combining diverse images across multiple epochs.

EXPERIENCE

Code Unnati – SAP CSR Program

Remote/Hybrid

Trainee – Emerging Technologies

- * Completed certified training in Machine Learning, Deep Learning, IoT, Computer Vision, and SAP ABAP on Business Technology Platform (BTP).
- * Gained hands-on experience with enterprise application development using SAP tools and platforms.
- * Applied learned skills to develop a sentiment analysis project for customer emotion classification.
- * Program implemented by Edunet Foundation under SAP's CSR initiative.

Sparks To Ideas

Ahmedabad, India

AI/ML Intern

Feb. 2025 - Mar. 2025

- * Completed hands-on internship in Artificial Intelligence and Machine Learning with Python.
- * Worked on practical implementations of ML workflows, model training, and deployment.
- * Gained foundational experience in applying AI/ML techniques to real-world problems.

Codtech IT Solutions Pvt. Ltd.

Remote

Artificial Intelligence Intern

Apr 2025 – May 2025

- * Completed a 4-week online internship focused on practical AI projects.
- * Developed a text summarization tool using Python to create concise article summaries.
- * Built a functional speech-to-text system leveraging pre-trained models like SpeechRecognition and Wav2Vec.
- * Implemented neural style transfer algorithms to apply artistic effects to images.
- * Created a text generation model using GPT/LSTM architectures for coherent paragraph generation.
- * Followed best coding practices with proper commenting and maintained all project code in a GitHub repository.
- * Collaborated virtually with mentors, participated in regular progress updates, and adhered to company guidelines and deadlines.

TECHNICAL SKILLS

Languages: Python, R, C/C++

Technologies: Machine Learning, Deep Learning, Computer Vision, Data Visualization

Developer Tools: Git, VS Code, Visual Studio, Jupyter Notebook, Google Colab, PyCharm

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn, NLTK, OpenCV

Concepts: Data Structures and Algorithms, Supervised and Unsupervised Learning, Operating Systems, OOP
